ODS goes high-def with ODC Nimbus

ODC Nimbus has sold one of its HDBD mastering systems to ODS Optical Disc Service of Germany. This is the second such sale of this equipment for the commercial production of both HD DVD and Blu-ray discs; the first was to Deluxe Digital in California. ODS is the largest optical disc replicator in Europe, with an annual output of 800 million discs.

"We thoroughly investigated the available high-density mastering equipment and chose the ODC Nimbus HDBD system for several reasons. Most important, it produces excellent masters resulting in in-spec, playable discs in both of the next-generation formats," explained Wilhelm Mittrich, CEO of ODS. "This is critical to us as we need to have dual capability in order to satisfy our customers."

"We are thrilled to be working with ODS, especially with this equipment. They are a very technically knowledgeable customer and their selection of the ODC Nimbus HDBD LBR validates our concept for HD DVD and Blu-ray mastering."
